

Have your **skin smile** on a **mediterranean diet**

Now there's a new way to help keep skin healthy and good looking.

It's called Opextan™.

Produced by Indena and developed jointly with Japan's Kanebo Cosmetics, this extract from the fruits of the Mediterranean olive tree contains a series of powerful polyphenol antioxidants. Among them verbacoside, a substance found only in the fruit of the olive that is five times as active as the other polyphenols. Clinical tests have proved that Opextan™, used orally or topically, combats free radicals, makes the skin less sensitive to harmful UV radiation and protects it from UV damage.

It also helps prevent wrinkles.

To find out more, contact Indena today.
